Endothelial cells − GO GSEA
activated
suppressed
cellular response to interferon−beta
response to interferon−beta
antigen processing and presentation of endogenous peptide antigen
antigen processing and presentation of endogenous peptide antigen via MHC class I
antigen processing and presentation of exogenous peptide antigen
antigen processing and presentation of exogenous antigen
response to type II interferon
negative regulation of mitotic nuclear division
negative regulation of viral process
negative regulation of innate immune response
regulation of chromosome separation
antigen processing and presentation
negative regulation of response to biotic stimulus
regulation of chromosome segregation
mitotic sister chromatid segregation
negative regulation of immune response
sister chromatid segregation
mitotic nuclear division
nuclear division
nuclear chromosome segregation
organelle fission
appendage morphogenesis
limb morphogenesis
appendage development
limb development
chromosome segregation
anterior/posterior pattern specification
